Installing Heat Into The Church

- ▣ This project was farmed out entirely to a licensed electrical contractor. Bids were taken, and awarded. The work was completed properly, and inspection approved. This church is 136 years old, and they have not had heat for several years, because of lack of funding to replace an antiquated heating system. Therefore, they have only held their church services in the Spring, Summer, and early Fall. They now can have year around services. This project was funded with individual donations from various Summers County citizens, current and past. Thank you for your financial support for our causes!
